

Training

VF078 Sentinel Technical Specialist (2 Days)

About the Course

This two-day intensive course covers all the technical material included in the *Sentinel Technical Specialist Certification Test* (scheduled separately). Learn core Fidessa architecture including database structure, SmartSockets messaging and the Sentinel application suite. Learn the purpose of all server-side components as well as how to install, configure and trouble-shoot them. Learn to install and configure the Sentinel client applications including the GUI and Web interface.

Course objectives

On completing the course, the delegate will be able to:

- Understand and configure the SmartSockets message bus architecture
- Understand the key features of the Fidessa database and how the database is accessed
- Install, configure and troubleshoot the functionalities of all Sentinel components: client, servers and Web
- Explain how caching is used to improve performance and how caches are monitored and refreshed
- Demonstrate how asynchronous persistence is used to improve performance
- Configure logging for Sentinel components
- Understand and explain how Sentinel integrates with external systems and the workflows which result
- Understand data flow and load data using Fidessa Data Loaders

Course Contents

- Architecture Overview & Installation
- Messaging and Database Systems
- Server-side Components
- Data Loading
- Maintenance and Support

Who should attend

- Technical and operational staff who support and maintain Sentinel

Course pre-requisites

- Participants should be familiar with standard concepts and industry terminology used in compliance enforcement, monitoring and management.
- Participants should be familiar with SQL and standard database concepts and comfortable investigating technical architecture
